VP6D Ducie Island –update October 30

In order to achieve a safe departure from Ducie Island – at 15:37z the skipper directed us to shut down today. We are beginning that process as I type this note.

It's been raining all night, with 20+ knot winds. The ship is about 300 meters offshore, the forecast indicates continuing 20+ knot winds, 2 – 3 meter seas.

We are collecting all the logs and will send to the EU QSL management team (hopefully before we leave), they will remove FT8 dupes and refresh the server before turning on OQRS.

We want to thank everyone for their support and hope we met your expectations.

OC-113 Maria Est Atoll, OC-297 Morane Atoll –update

In just a little over 5 weeks, Adrian (K08SCA) and I will be heading down to French Polynesia for the challenging activation of OC-113 and 297. Time flies quickly now, as we try our best to calmly hold our excitement in check as we prepare in intimate detail how best to reach the atolls.

The landing plan consists of two stages. In the first stage, the two of us will occupy one of the zodiacs, in which we need to secure the radio equipment, power components, and camping gear. This zodiac will be tracked close to the reef by a second zodiac, manoeuvred by the skipper. From there, the second part of the landing will require that we paddle hard to go across the reef, trying to be in synch with the incoming waves, keeping the boat well balanced. We will obviously scout in advance for the best location to undertake it, hoping for a low ocean swell, with little to no wind.
